Bugs:

ADMIN

- **Login Page:**
  After logging in, cookies are not clearing. This causes the admin to access the system without credentials even after logout.
- **Professors:**
  Course assignment is failing, showing the message "Failed to assign course."
- **Users:**
  Instructors cannot be deleted.
  The Active and Inactive status only change after refresh; they do not update immediately.
- **Students:**
  After creating a student, the username is generated using the email instead of a serial number with an order. We want the username to be a serial number, along with a password. Also, course assignment to students is not working.
- **Question Bank:**
  Questions are not deleting.
- **Examination:**
  The Examinations module is not necessary at this time.
- **Dashboard:**
  If there are 2 professors in the Professors section, the dashboard incorrectly shows 3 professors.
- **Courseware:**
  When attaching courseware PDFs, the courseware must appear exactly as per the attached PDF, without any changes to names or structure.

INSTRUCTOR

- **Dashboard:**
  Since courses are not assigned to professors, courses are not showing in the professor's dashboard.
- **Profile:**
  Instructor profile is not displaying.
